1. Abstract

This report will present the functionality and use cases of the proposed mobile application. It will describe its goals, users, technology, and the development plan, using multiple tools.
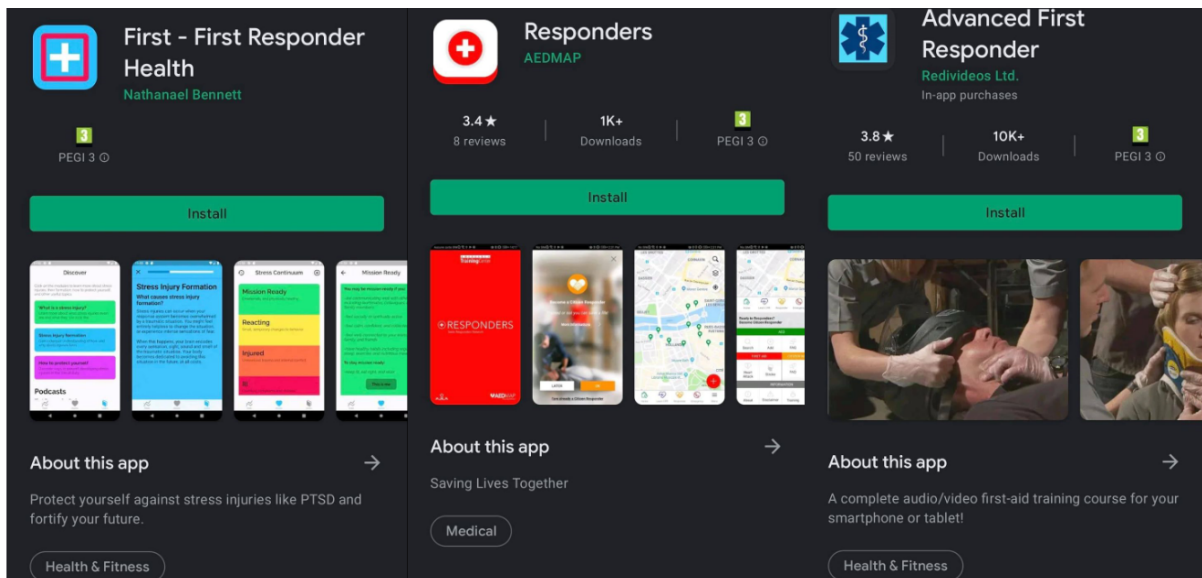

2. Goal and users

The purpose of this application is to assist first responders and rescuers in documenting and updating information regarding a patient, alongside assisting in improving communication between dispatch and the rescue team. The main users of this application will be first responders/responders.

3. Introduction

The problem that this application is aiming to address is being able to store and record the medical status of patients in order to assist the first responders in assisting and assessing they're status.

4. State of art

Currently on the app store there are a few similar applications (at least in name) but the other applications have the purpose of a manual.

5. What is the original contribution of the author?

The application will include a way to store simple information regarding the patient at hand in order to provide

6. Development Plan

I will use the programming language Kotlin, which is derived from Java. This will be used in the working environment created by Android Studio.
